Levaloc

For window safety and security

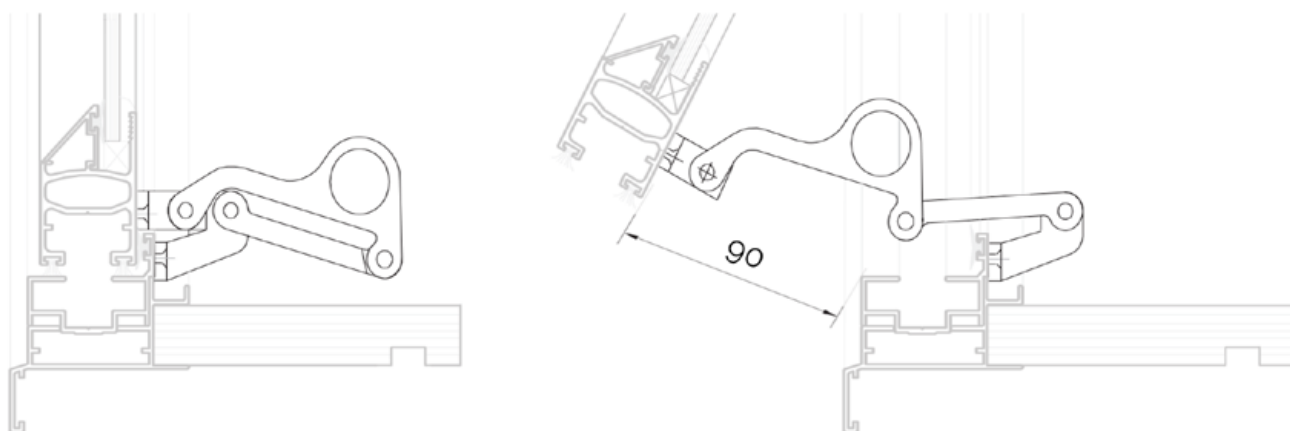

Spectrum Levaloc

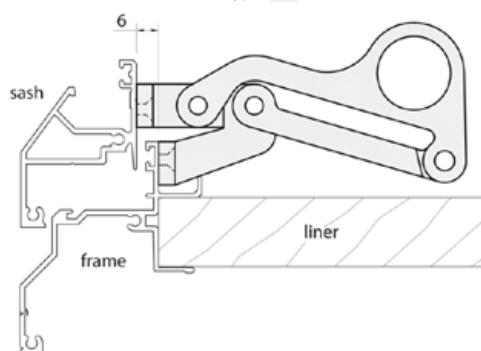

The levaloc is a major innovation in window safety and security.

- Made from extruded aluminium and stainless steel with nylon bearings, the design not only looks good, but also complies with 'F4 Safety from falling' in NZBC.
- Either individually or coupled pairs for wider sashes, the levaloc is ideal in bedrooms, bathrooms, kitchens or any windows that require security ventilation.
- They can also be fitted with a coupling rod. This enables you to operate them in banks with winding gear.
- A hooked pole can be used to operate the openers in awkward places, such as over sinks, benches or baths and above doors. The levaloc is the all round answer to safe, secure ventilation for most situations.
- The Levaloc is manufactured & stocked in black, white and silver pearl. They can be supplied in any powdercoat colour you require, but will incur a non-standard colour surcharge.
- CAD & PDF technical drawings available.

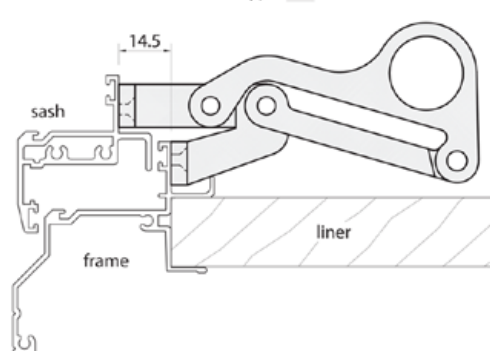

Easy fit: Aluminium windows, Timber windows, Steel windows, PVC windows, Existing windows
